SILASTIC® 3133 Base and SILASTIC® 33 Curing agent

General Purpose Silicone Mold Making Rubber

FEATURES:
• Outstanding release properties
• High flowability and long working time
• Low hardness
• High elasticity, for easy removal of complex replica parts
• Economic and easy to use

APPLICATIONS
• SILASTIC 3133 is suited for the detailed reproduction of figurines, art objects and similar items. It is particularly recommended where no deep undercuts or complex shapes are present.

TYPICAL PROPERTIES
Specification writers: These values are not intended for use in preparing specifications. Please contact your local Dow Corning sales representative prior to writing specifications on this product.

DESCRIPTION
SILASTIC 3133 Moldmaking Rubber is a two-component material consisting of SILASTIC 3133 Base, which when mixed with SILASTIC 33 Curing Agent, cures at room temperature by a condensation reaction. A range of materials can be cast into the cured silicone mold: plaster, polyurethane, polyester and other reactive resins are materials typically used.

HOW TO USE
Substrate preparation The surface of the original should be clean and free of loose material. If necessary, and in particular with porous substrates, use a suitable release agent such as petroleum jelly or soap solution.

Mixing
Thoroughly stir SILASTIC 3133 Base before use, as filler separation may occur upon prolonged storage. Weigh 100 parts of SILASTIC 3133 Base and 5 parts SILASTIC 33 Curing Agent in a clean container. Mix together until the curing agent is completely dispersed in the base. Hand or mechanical mixing can be used, but do not allow the temperature to exceed 35°C (95°F). Mix suitably small quantities to ensure thorough mixing of the base and curing agent.
It is strongly recommended that entrapped air be removed in a vacuum chamber, allowing the mix to completely expand and then collapse. After a further 12 minutes under vacuum, the mix should be inspected and can be used if free of air bubbles. A volume increase of 35 times will occur on vacuum de-airing the mixture, so a suitably large container should be chosen. Caution: prolonged vacuum will remove volatile components from the mix and may result in poor thick section cure and non-typical properties. Note: If no vacuum de-airing equipment is available, air entrapment can be minimized by mixing a small
quantity of base and curing agent, then using a brush, painting the
original with a 12mm layer. Leave at room temperature until the surface is bubble free and the layer has begun to
cure. Mix a further quantity of base and curing agent and proceed as follows to produce a final mold.

**Pouring the mixture and curing**
Pour the mixed SILASTIC 3133 Base and SILASTIC 33 Curing Agent as soon as possible onto the original, avoiding air
entrapment. The catalyzed material will cure to a flexible rubber within 24 hours at room temperature. Then the mold can be
removed. If the working temperature is significantly lower, the cure time will be longer. If the room
temperature or humidity is very high, the working time of the catalyzed mixture will be reduced. The final
mechanical properties of the mold will be reached within 7 days.

**ADDITIONAL INFORMATION**

**Use at high temperatures**
Some molds produced from condensation cure silicone rubbers can degrade when exposed to temperatures above 150°C
(302°F) over a period of time or when totally confined in storage at high ambient temperatures. This can result in softening
and loss of elastic properties. Please contact a Dow Corning distributor for further advice.

**Resistance to casting materials**
The chemical resistance of fully cured SILASTIC 3133 is excellent, and similar to all condensation cure
silicone elastomers. It should be noted however that ultimately, resins and other aggressive casting materials will
attack silicone molds, changing physical properties, surface release and possibly mold dimensions. Molds
should be checked periodically during long production runs.

**Note:**
SILASTIC 3133 is an industrial product and must not be used in food molding, dental and human skin molding applications.

**HANDLING PRECAUTIONS**
PRODUCT SAFETY INFORMATION REQUIRED FOR SAFE USE IS NOT INCLUDED. BEFORE HANDLING, READ
PRODUCT AND SAFETY DATA SHEETS AND CONTAINER LABELS FOR SAFE USE, PHYSICAL AND HEALTH
HAZARD INFORMATION. THE SAFETY DATA SHEET IS AVAILABLE FROM YOUR LOCAL DOW CORNING SALES
REPRESENTATIVE.

**USABLE LIFE AND STORAGE**
When stored at or below 30°C (86°F) in the original unopened containers, SILASTIC 3133 Base and
SILASTIC 33 Curing Agent have a usable life of 9 months from the date of production.

**PACKAGING**
SILASTIC 3133 Base is available in 5kg, 20kg and 200kg containers. SILASTIC 33 Curing Agent is
available in 0.25kg, 1kg and 10kg containers.

**LIMITATIONS**
This product is neither tested nor represented as suitable for medical or pharmaceutical uses.

**HEALTH AND ENVIRONMENTAL INFORMATION**
To support customers in their product safety needs, Dow Corning has an extensive Product Stewardship
organization and a team of Health, Environment and Regulatory Affairs specialists available in each area.
For further information, please consult your local Dow Corning representative.

**WARRANTY INFORMATION - PLEASE READ CAREFULLY**
The information contained herein is offered in good faith and is believed to be accurate. However, because
conditions and methods of use of our products are beyond our control, this information should not be used in
substitution for customer's tests to ensure that Dow Corning's products are safe, effective, and fully
satisfactory for the intended end use. Dow Corning's sole warranty is that the product will meet the Dow Corning sales
specifications in effect at the time of shipment. Your exclusive remedy for breach of such warranty is limited to refund of
purchase price or replacement of any product shown to be other than as warranted. Dow Corning specifically disclaims any
other express or implied warranty of fitness for a particular purpose or merchantability. Unless Dow Corning provides you with
a specific, duly signed endorsement of fitness for use, Dow Corning
disclaims liability for any incidental or consequential damages. Suggestions of use shall not be taken as inducements to
infringe any patent.
